Zyad Yasser Hussien

Frontend Developer

zyadyasser1420@gmail.com | +201112557579 | El Nozha, Cairo, Egypt | linkedin.com/in/zyad-yasser-8316b01a9 | github.com/zyadyasser1472

PROFESSIONAL SUMMARY

Frontend Developer with 1+ year of experience building production-grade React and Next.js web applications. Proficient in TypeScript, React Server Components (RSC), Server-Side Rendering (SSR), GraphQL with Apollo Client, and Tailwind CSS. Experienced in unit and integration testing (Vitest, React Testing Library), CI/CD workflows, RTL/i18n engineering, design system migration, SEO optimization, and cross-browser compatibility. Delivered features across B2B SaaS, real estate, and e-commerce platforms in production environments at CodeToon.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, Liquid (Shopify)

Frameworks & Libraries: React.js, Next.js (App Router, RSC, SSR), React 19, Redux, React Query, Framer Motion, GSAP, Embla Carousel

Styling: Tailwind CSS (v3 & v4), Bootstrap, Material UI, Chakra UI, shadcn/ui, Design Tokens, Design Systems

APIs & Data: GraphQL, Apollo Client (+ codegen), RESTful API, Axios, Geolocation API, View Transitions API

Testing: Vitest, React Testing Library, Unit Testing, Integration Testing

Tools & Platforms: Git, GitHub, CI/CD, Cloudflare Workers, Shopify Online Store 2.0, Webpack, Node.js

Other: i18n / RTL Engineering (next-intl), SEO Optimization, Web Performance, Responsive Design, Accessibility (a11y), Figma, Formik, React Hook Form

WORK EXPERIENCE

Frontend Developer

CodeToon - Software House | Cairo, Egypt

September 2025 - Present | Full-Time

- Developed and maintained responsive, scalable user interfaces using Next.js (App Router) and React across multiple production client projects.
- Integrated GraphQL APIs with Apollo Client, implementing caching strategies and optimizing data-fetching patterns to improve application performance.
- Wrote unit and integration tests using Vitest and React Testing Library as a CI/CD-gated quality requirement, reducing regression rate across shared components.
- Led design system migration across 3+ pages, converting legacy styles to a structured design-token architecture (colors, typography) while maintaining RTL/Arabic layout integrity.
- Refactored reusable UI component libraries to improve consistency, accessibility (a11y), and long-term maintainability.
- Collaborated in an Agile, Git-based workflow contributing to CI/CD pipelines, branching strategies, code reviews, and parallel feature development.

PROJECTS

Maksab - Recruitment Platform

mksab.com.sa | Frontend Developer | Job Seekers & Employers, Live Production Codebase

September 2026 - Present

- Built the job seeker journey end to end: Google and Apple sign-in, multi-step onboarding with CV upload and analysis, and a dashboard with an animated, collapsible sidebar.
- Developed job search with server-rendered filters, job details pages, saved jobs, and a full-page apply flow with CV selection, screening questions, and a success screen.
- Built the seeker profile: CV management (upload, replace, set default, delete), certificates, training courses, intro video upload through presigned URLs, and account settings.

- Built the employer portal: company registration with verification and subscription plans, dashboard, job posting and editing, applicant management, candidate search, interview scheduling, and reports.
- Integrated the GraphQL API with Apollo Client and typed codegen, and built reusable, accessible components (dropdowns, date and month pickers, international phone input) with full Arabic RTL / English support via next-intl.
- Set up CI/CD with Vitest + React Testing Library unit tests, Playwright end-to-end tests, per-PR preview deployments, and production deploys on Cloudflare Workers (OpenNext/Wrangler).

Alfehris - B2B Factory Directory Platform

alfehris.com | Frontend Developer | Team of 2, Live Production Codebase
April 2026 - Present

- Built search and discovery UI featuring geolocation-based result sorting, sector/keyword autosuggestions, rating sort, and search-scope filters - all server-rendered via React Server Components and GraphQL for maximum SEO performance.
- Implemented monetized ad UI including sponsored result interleaving, banner ads, and responsive advertisement carousels across mobile and desktop breakpoints.
- Developed user-facing features: Saved/Bookmarks page, multi-phone-number support on factory profiles, and redesigned voice-search UI.
- Led design system migration across homepage, about, and search pages to a new design-token system (colors, typography), maintaining correct RTL/Arabic layout throughout.
- Converted static UI sections to Embla Carousel with RTL-aware scroll and drag direction handling.
- Wrote Vitest + React Testing Library tests (hooks, forms, carousel components) as a CI/CD-gated requirement.
- Technologies: Next.js 14 (App Router, RSC, SSR), React 19, TypeScript, Tailwind CSS v4, Apollo Client, GraphQL codegen, Vitest, next-intl, Embla Carousel, Cloudflare Workers, OpenNext/Wrangler.

Qairox - Custom Shopify Theme Development

qairox.net | Shopify Theme Developer | D2C Streetwear E-commerce
2026

- Customized a Shopify Online Store 2.0 theme (Liquid, sections/blocks architecture) for a live D2C streetwear brand, working across 100+ custom blocks, 40+ sections, and 119 snippets.
- Built conversion rate optimization (CRO) features: dynamic sale/shipping announcement bar with live countdown timers driven by product metafields, and redesigned mobile cart drawer with trust badges and CTA optimization.
- Implemented animated 'Buy it Now' button (periodic shake effect) and mobile nav/cart drawer redesign with theme-customizer-controlled hover and accent color settings.
- Diagnosed and resolved cross-device layout regressions (carousel gutter alignment, hero video rendering, mobile scroll behavior) using browser DevTools and Shopify theme customizer.
- Scaffolded custom Liquid components using Shopify AI block-generation tooling, then hand-refined markup, CSS, and JavaScript for production reliability.
- Implemented internationalization (i18n) support across 20+ locales using 51 locale files and applied View Transitions API for smooth client-side navigation.
- Technologies: Shopify Liquid, Online Store 2.0, JavaScript (ES6+), CSS3, i18n (20+ locales), View Transitions API.

Egypt Best Properties - Real Estate Platform

egyptbestproperties.com | Frontend Developer
September 2025 - December 2025

- Translated UI/UX designs (Figma) into responsive, accessible, and reusable React components for a production real estate platform.
- Built dynamic property listing pages with advanced search and filtering (location, price, type, developer) improving user engagement.
- Implemented mobile-first, responsive interfaces using Tailwind CSS ensuring cross-browser compatibility.
- Optimized SEO structure and metadata (Open Graph, structured data) across pages to improve organic search visibility.
- Improved performance through efficient SSR rendering strategies and reusable component design patterns.

CodeToon - Corporate Website

codetoon.net | Frontend Developer
February 2026 - April 2026

- Translated Figma designs into responsive, accessible, pixel-perfect UI components in a Next.js (App Router) application.
- Applied code-splitting and lazy loading strategies to reduce initial load time and improve Core Web Vitals.
- Implemented smooth, production-optimized animations with Framer Motion.
- Integrated Apollo Client with GraphQL APIs, including caching strategies and custom error handling.
- Developed unit and integration tests with React Testing Library to ensure component reliability.

- Applied technical SEO and on-page optimizations improving organic visibility and branded search ranking.

Buongo - Cloud ERP Platform Website

buongo.com | Frontend Developer | Team of 2, Live Production Website
May 2026 - October 2026

- Migrated the marketing website from PHP to Next.js (App Router) with TypeScript and Tailwind CSS v4, rebuilding the navbar, hero, dashboard showcase, CTA, and footer as reusable components.
- Built the demo request flow: a modal form with Formik + Yup validation, international phone input, and toast and success popups, connected to the backend through a GraphQL mutation.
- Replaced the pricing section with a lead-capture form to drive sales inquiries, and added localized hero artwork for Arabic and English.
- Added SEO metadata and structured data (JSON-LD) for an Arabic-first bilingual (RTL / LTR) site with dedicated module landing pages.
- Built Privacy Policy, Terms & Conditions, and Support pages on a shared legal-page layout.
- Deployed on Cloudflare Workers with OpenNext/Wrangler, with CI builds and the buongo.com custom domain.

EDUCATION

Bachelor of Fine Arts (BFA)

Helwan University | Cairo, Egypt
September 2018 - July 2023 | Graduation Project Grade: Excellent

CERTIFICATIONS & COURSES

Frontend Development Diploma

Route Academy | Cairo, Egypt
January 2025 - August 2025

LANGUAGES

Arabic: Native Speaker | English: Intermediate (B1)
